Performed NFPA 211 Level _____ inspection (See back of form)

COMMENTS:

The National Fire Protection Association recommends an annual inspection of all fireplaces, chimneys, and vents. The next inspection of your system should take place on:

Furthermore, by signing, you understand that Patriot Chimney Service, LLC has performed a visual inspection and is not responsible for concealed or hidden defects. Patriot Chimney Service, LLC has discussed any visible defects and has recommended corrective actions. Since hidden defects and conditions of use are beyond the control of Patriot Chimney Service, LLC, you understand no guarantee or warranty of fire safety of any appliance is given or implied.

By signing, you agree that Patriot Chimney Service, LLC has explained to you, and now fully understand the apparent condition of your fireplace, appliance, chimney, or vent system at this time.

Patriot Chimney Service, LLC performs chimney inspections that meet the standards established by the National Fire Protection Association (NFPA). The 2000 edition of the NFPA 211, Standards for Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances identifies three levels of chimney inspection, and when each level of inspection should be performed.

	Scope	Required Access	Occasion	Indications
LEVEL 1	<p>Basic condition of chimney and flue</p> <p>Absence of combustible deposits or blockage in flue</p> <p>Accessible areas of appliance & connector</p>	<p>Readily accessible areas of the chimney interior and exterior.</p> <p>Accessible portions of the appliance and chimney connector</p>	<p>Annually</p> <p>During routine chimney sweeping</p> <p>Upon replacement of connected appliance with a similar unit</p>	<p>When verification of serviceability for continued use under present conditions is needed</p>
LEVEL 2	<p>A Level 1 Inspection and:</p> <p>Accessible portions of the chimney structure and all enclosed flues, including size and suitability of flues</p> <p>Proper clearances to combustibles</p>	<p>All accessible areas, interior and exterior, including parts of the chimney passing through crawlspaces and attics</p> <p>Shall include video scan and other means of flue interior visual inspection</p>	<p>Adding or removing an appliance; replacing an appliance with one of a different type of fuel.</p> <p>After an event likely to cause damage and before relining</p> <p>A real estate sale or transfer</p>	<p>Verification of chimney serviceability for continued service under changing conditions, or a level 1 inspection is inadequate</p>
LEVEL 3	<p>Everything in Level 2</p> <p>Concealed areas of the chimney structure and enclosed flues.</p> <p>Clearances from combustibles</p>	<p>Designated parts of the chimney structure and the building, including concealed areas.</p> <p>Removal of parts of the chimney or building as needed to gain access to specific concealed areas</p>	<p>As needed to examine damage to the chimney or building.</p> <p>When a lower level inspection results in detected or suspected hazard that can't be checked without access to concealed areas</p>	<p>When knowledge of the condition of the chimney is critical to the renewed or continued use of the chimney.</p> <p>Required only for areas of concern that can't be properly evaluated by a lower level inspection</p>

Readily Accessible - Exposed or capable of being exposed for operation, inspection, or maintenance without the use of tools or ladders

Accessible - Exposed or capable of being exposed for operation, inspection, or maintenance with the use of common tools without damage to the chimney structure, building, or finished surfaces.

Concealed - Not capable of being exposed for operation, inspection, or maintenance without the use of special tools or without damage to the chimney structure, building, or finished surfaces.
